Glove

To the Winchcombe Rural District Council

Gentlemen

For the years 1916 & 1917 I have been instructed by the Local Government Board to make only interim reports upon any important Sanitary matter that might occur. I was also suggested that such report should not be printed but that it might be type written.
No special forms or tables have been issued.
During 1916 nothing at all of any interest or importance from a Sanitary point of view occurred and consequently my present report will included 1916 & 1917

In 1916 there were 112 Births (8 of which were illegitimate. This is equal to a birth rate of 12.6 per 1000 (a very poor birth rate indeed) There were 124 deaths which is equal to a death rate of 13.6 per 1000 This is nearly 3 per 1000 less than for 1915. Twelve of the deaths were infantile - that is equal to 107.1 per 1000 Children born (a very high infantile death rate for a Country district).
There was no death from any

Zymotic disease.
In 1917 there were 14 births (8 of which were illegitimate) this is the same Birth rate as for 1916 viz 12.6 per 1000.
The deaths were 136 Equal to a death rate of 15.3 per 1000 An increase of nearly 2 per 1000 on 1916
There were 9 infantile deaths which is equal to an infantile death rate of 70.9 per 1000
~~The highest rate since~~
~~Since the Notification~~
~~Act. There have been Epidemics of~~
~~1. The Scarlet fever 1911~~
~~2. The high price of milk &~~
~~food generally~~

There were 2 deaths from Zymotic disease, each of them from acute enteritis or poisoning of the. Neither case had any connection whatsoever with the other. Could not trace the source of infection in either case.
In the parish of Hindlead situate in the County of Worcester there has been one birth (illegitimate) & no death during the 2 years.
We have been notified under the Infectious diseases Notification Act in 1916. 65 Cases
In 1917. 41 Cases (5 of these have been Measles)
